

Please do not interfere in my right to obtain local weather and traffic information via XM radio. I pay for this service which does not use the public airways or rely on subsidy in any way. It is superior in quality to anything offered by the local broadcasters. This is nothing but a blatant attempt by an old, powerful lobby to stifle a growing, competing product as they've tried so many times throughout history. For a change, do something to show that you're not in the back pocket of an elite group of corporate interests, and stay out of satellite radio content.
